RCS LAUNCHPAD™

Interactivity Made Simple

RCS LaunchPad

LaunchPad is an easy-to-use, interactive touchscreen solution for delivering advanced sports analysis on-air before, during, and after soccer matches. It lets users graphically analyze and telestrate data and video including results, fixtures, leaders, shots, passes, tackles, and more.

LaunchPad can be easily transported as production demands and arrives tailored with custom design elements (colors, fonts, logos, backgrounds) that match each client's aesthetic.

Each system is powered by RCS software, the RCS DataCenter cloud-based aggregator platform, a Viz Engine, and third-party touchscreen. DataCenter culls live data and analytics from Opta Sports, eliminating the traditional overhead of backend integration, supplemental hardware, and local database maintenance that other systems typically require.

LaunchPad is available via monthly subscription, which includes access to software updates and support. Contact info@realitychecksystems.com for more infomation.

System Features

- Intuitive web-based UI (no engineering or IT required)
- Dynamically change the display of competitions or leagues on the fly by week, month, or year
- Save pages to playlists and build rundowns
- Add shortcuts and set up defaults
- Customize or create manual graphic elements during production
- Connect via Wi-Fi to the RCS cloud database (RCS DataCenter)
- Access and control remotely with the RCS Navigator iPad app (included)
- Full video server (EVS) and analysis (Piero, Viz Libero) integration support
- Available in any language
